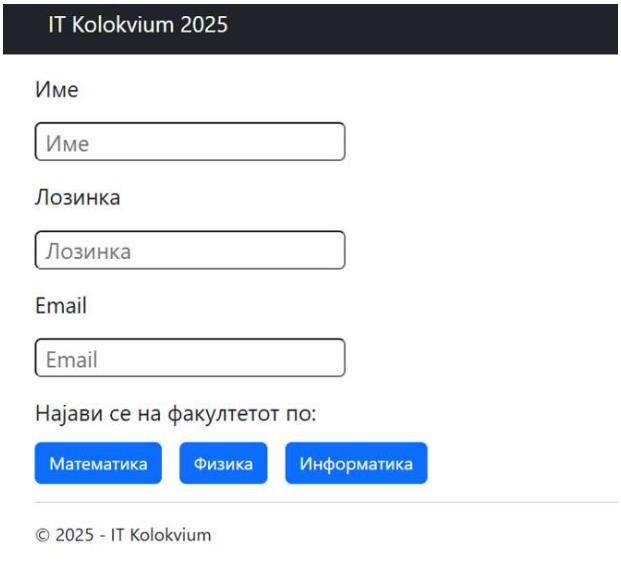
Internet Technologies 2025 – Colloquium 1
12.04.2025

The faculties of Mathematics, Physics and Informatics use the same system for courses and calculating average grades. The system consists of 3 forms.

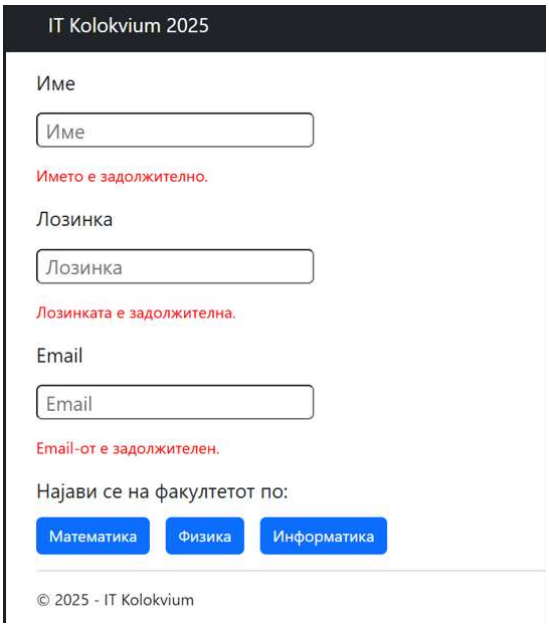
Form 1: "Najava.aspx"

- e-mail are entered .
- To send a request to the server:
    1. A name must be entered, which consists only of letters.
    2. He must enter a password, which may contain both numbers and letters.
    3. You must enter an email address and its format must be valid.
- At the end of the form there is a label with the text " Login " , and below it three buttons.
    1. The first/second/third button has the text “ Mathematics ” / “ Physics ” / “ Informatics ” and sends the QueryString “ subject ” with the value “ mathematics ” /“ physics ”/“ informatics ” to the request for the next form – respectively.

Here are two images, one with empty forms, one with incorrectly filled forms | Image1 | Image 2



Слика 1



Слика 2

Form 2: "Popolni.aspx"

- In this form, when loading, an image of the logo of the appropriate faculty should be displayed, which will be read from the QueryString " subject " of *the request* . (If you do not display an image, then insert a label with the name of the appropriate faculty)
- Based on the selected faculty, two lists should be displayed next:
    1. List of courses, showing for each faculty:
        - Mathematics: "Calculus", "Analysis", "Probability"
        - Physics: "Electrical engineering", "Electric circuits"
        - Informatics: "Structural", "Object", "Algorithms", "IT"
    2. A list of grades, which will have the same number of elements as the list of subjects, and each element will be "Enter 1", "Enter 2", ... up to the number of subjects

  (if you are not reading the faculty from the QueryString , add three buttons to select the faculty to dynamically populate the lists accordingly)
- Add a text field "Rating" in which the user can enter a numerical rating from 5 to 10. *(you can set up a validation control)*
- An "Add" button that:
    1. Validates that a grade has been selected in the grade list.
    2. Validates that a number has been entered in the text field and that it is between 5 and 10. *(not necessary if you have already set up a validation control)*
    3. It will set the text box for the appropriate grade in the list according to the grade entered in the text box. *(only the Text field in the list, the Value field should remain the same because all elements in the list should have different Value fields and you want to allow entering the same grade multiple times)*
    4. If successful, it will then remove the selection from the grade list.
- "Calculate Average" button which will check if all grades have been added and send the user to the next form

Form 3: "Prosek.aspx"

- This form will print the student's name, email address, and grade point average in the following format:
    1. "NAME, Thank you for using our system. Your average is AVERAGE. You will receive information about the entered grades and the calculated average by email, at E- MAIL. " .
